

# CRISP, NanoDays, and Yale Pathways

On March 22, 2012, CRISP, in collaboration with Yale's Science Pathways, hosted a public lecture in support of the 2012 NanoDays national outreach campaign. IRG2 leader Jan Schroers gave a talk entitled, ***Strong as Steel, but Pliable as Plastic: Metals Conquering the Nanoworld.*** Hands-on demonstrations for students were provided by CRISP researchers.

The Yale Science Pathways initiative supports public school students' success in science throughout their academic career and aims to increase the number of New Haven students who go on to earn college degrees in science.
